X Lewatit®

LEWATIT® S 1567

A special ion exchange resin for the efficient softening of water

Lewatit® S 1567 is a monodisperse cation exchanger made using a solvent-free production process. It has been developed for the softening of both potable water* in household installations (e.g., softening units equipped with cartridges) and raw water used in industrial plants.

Excellent stability

Lewatit® S 1567 is very economical due to the product's durability and long life. The monodisperse ion exchange matrix is very stable both chemically and mechanically, and its uniformity ensures a homogenous flow through the filter. This minimizes rinse water requirements and maximizes utilization of the regenerant.

Low content of small particles

Heterodisperse ion exchangers often contain a volume of fines, which may cause system problems. Possible effects are higher pressure loss, blockage of resin strainers, or a reduction in resin volume due to loss of fines from the system. As **Lewatit® S 1567** is a monodisperse resin, the content of such fines is minimal.

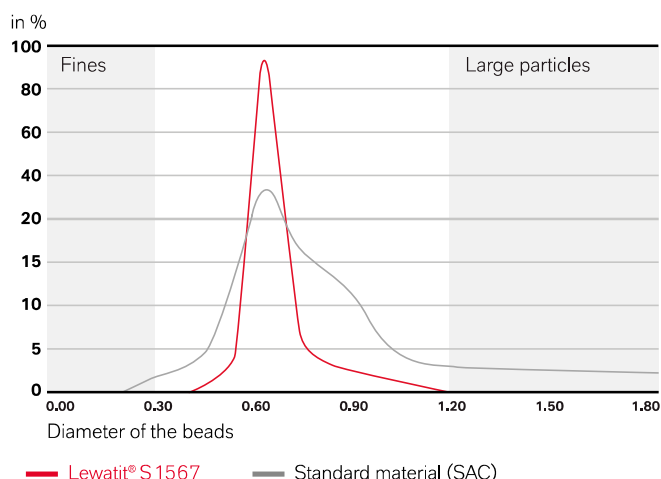

Stability of a competitive product

Optimal stability of the monodisperse **Lewatit® S 1567**

OPTIMAL ION EXCHANGE RESIN FOR WATER SOFTENING

Complete disinfection

Modern potable water softening plants are automatically treated during regeneration with a solution of chlorinated sodium chloride. This acts to kill germs, bacteria, or other microorganisms. In some cases, and depending on its structure, the resin is able to cause a considerable loss of disinfectant (e.g., free chlorine). The consequence would be an incomplete removal of germs and microorganisms.

Due to our latest non-solvent technology in the production process of **Lewatit® S 1567** we achieve an outstanding product quality with a very high stability as well as a bead surface with minimized gaps, unevenness and roughness compared to other softening resins. This leads to a reduced surface fouling through bacteria. Because of these characteristics the use of free chlorine for disinfection shows a higher efficiency. Therefore, the product is specifically designed and perfectly suitable for the softening of water with disinfection units.

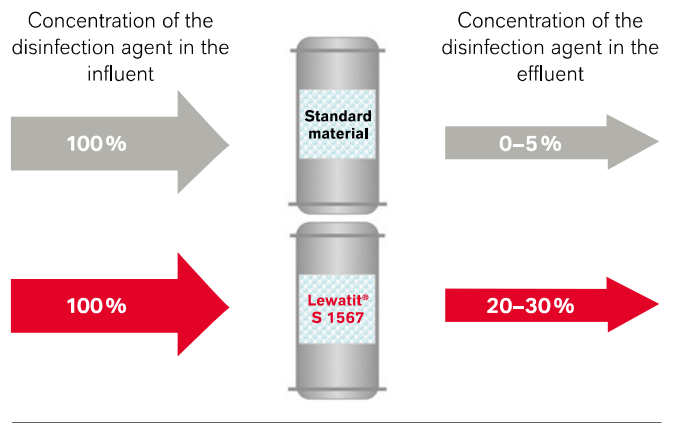

Optimal utilization of the total capacity (> 2.0 eq/l)

Monodisperse resins enable rapid kinetics and distinguish themselves with high operating capacities and minimal leakage.

ADVANTAGES AT A GLANCE

- Solvent-free sulfonation
- Simple and improved disinfection
- Monodispersity
- Excellent chemical and mechanical stabilities
- Very low content of fines
- High capacity

Captive use of a disinfecting agent for the ion exchange resin

Health and Safety Information: Appropriate literature has been assembled which provides information concerning the health and safety precautions that must be observed when handling the LANXESS products mentioned in this publication. For materials mentioned which are not LANXESS products, appropriate industrial hygiene and other safety precautions recommended by their manufacturers should be followed. Before working with any of these products, you must read and become familiar with the available information on their hazards, proper use and handling. This cannot be overemphasized. Information is available in several forms, e.g., material safety data sheets, product information and product labels. Consult your LANXESS representative in Germany or contact the Regulatory Affairs and Product Safety Department of LANXESS Deutschland GmbH or – for business in the USA – the LANXESS Corporation Product Safety and Regulatory Affairs Department in Pittsburgh, PA, USA.

Regulatory Compliance Information: Some of the end uses of the products described in this publication must comply with applicable regulations, such as the FDA, BFR, NSF, USDA, and CPSC. If you have any questions on the regulatory status of these products, contact – for business in the USA – the LANXESS Corporation Regulatory Affairs and Product Safety Department in Pittsburgh, PA, USA or for business outside US the Regulatory Affairs and Product Safety Department of LANXESS Deutschland GmbH in Germany.

The manner in which you use and the purpose to which you put and utilize our products, technical assistance and information (whether verbal, written or by way of production evaluations), including any suggested formulations and recommendations are beyond our control. Therefore, it is imperative that you test our products, technical assistance and information to determine to your own satisfaction whether they are suitable for your intended uses and applications. This application-specific analysis must at least include testing to determine suitability from a technical as well as health, safety, and environmental standpoint. Such testing has not necessarily been done by us. Unless we otherwise agree in writing, all products are sold strictly pursuant to the terms of our standard conditions of sale. All information and technical assistance is given without warranty or guarantee and is subject to change without notice. It is expressly understood and agreed that you assume and hereby expressly release us from all liability, in tort, contract or otherwise, incurred in connection with the use of our products, technical assistance, and information.
